

evolution of population 17 pdf

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

Population genetics is a subfield of genetics that deals with genetic differences within and between populations, and is a part of evolutionary biology. Studies in this branch of biology examine such phenomena as adaptation, speciation, and population structure.. Population genetics was a vital ingredient in the emergence of the modern evolutionary synthesis.

Population genetics - Wikipedia

A common evolutionary strategy to change the phenotype of a species is to change the developmental progression that leads to that phenotype. This diagram is showing how bird evolution progressed to have the adult phenotypes look like the juvenile phenotype of the ancestral species.
