

### **linear algebra fraleigh and pdf**

Definition. A matrix is a rectangular array of numbers or other mathematical objects for which operations such as addition and multiplication are defined. Most commonly, a matrix over a field  $F$  is a rectangular array of scalars each of which is a member of  $F$ . Most of this article focuses on real and complex matrices, that is, matrices whose elements are real numbers or complex numbers ...

In linear algebra, a nilpotent matrix is a square matrix  $N$  such that  $N^k = 0$  for some positive integer  $k$ . The smallest such  $k$  is sometimes called the index of  $N$ . More generally, a nilpotent transformation is a linear transformation  $L$  of a vector space such that  $L^k = 0$  for some positive integer  $k$  (and thus,  $L^j = 0$  for all  $j \geq k$ ). Both of these concepts are special cases of a more general concept ...

In algebra lineare il polinomio caratteristico di una matrice quadrata su un campo  $\mathbb{K}$  è un polinomio definito a partire dalla matrice che ne descrive molte proprietà essenziali. Il polinomio caratteristico è un oggetto che dipende solo dalla classe di similitudine di una matrice, e pertanto fornisce molte informazioni sulla natura intrinseca delle trasformazioni lineari, caratterizzate ...
