

multiphase flow and transport pdf

Environment and nature. In nature and environment, rain, snow, fog, avalanches, mud slides, sediment transport, debris flows are all examples of multiphase flow where the behaviour of the phases are studied in different fields of natural science.

Single suction two-screw pumps The TUSHACO® two-screw pump is a rotary, self-priming positive displacement pump. The basic pump design is an overhung, single suction machine for low to moderate flow rates. The inboard ends of the two pumps' shafts are supported by a robust bearing frame.

Analyzing and modelling liquid-liquid two-phase flow has previously been explored by many researchers as well as present authors (Raj et al., 2005, Chakrabarti et al., 2006, Chakrabarti et al., 2007). Deposition in two-phase flow shows some characteristics similar to liquid-liquid two-phase flow.

A pump is a device that moves fluids (liquids or gases), or sometimes slurries, by mechanical action. Pumps can be classified into three major groups according to the method they use to move the fluid: direct lift, displacement, and gravity pumps. Pumps operate by some mechanism (typically reciprocating or rotary), and consume energy to perform mechanical work moving the fluid.
